## Math Common Core Learning Standards

## Operations \& Algebraic Thinking 1.OA

Represent and solve problems involving ddition and subtraction.
olve word problems involving within 20 to adding to, taking from, putting together, aking apart, and comparing, with unknow in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem. 2. Solve word problems that call for addition of three whole numbers whose sum is les han or equal to 20 , e.g., by using objects, rawings, and equations with a symbol for the nknown number to represent the problem.

Understand and apply properties of perations and the relationship between addition and subtraction.
3. Apply properties of operations as strategies o add and subtract. ${ }^{2}$ Examples: If $8+3=11$ is known, then $3+8=11$ is also known. (Commutative property of addition.) To add 2 $+6+4$, the second two numbers can be dded to make a ten, so $2+6+4=2+10=$ 12. (Associative property of addition.) 4. Understand subtraction as an unknownfend probl the mur that makes 10 whe added to 8 Add and subtract with 20

Add and subtract within 20.
5. Relate counting to addition and subtraction (e.g., by counting on 2 to add 2).
6. Add and subtract within 20 , demonstrating fluency for addition and subtraction within 10 Use strategies such as counting on; making en (e.g., $8+6=8+2+4=10+4=14$ ); decomposing a number leading to a ten (e.g., $13-4=13-3-1=10-1=9$, using - . knowing that $8+4=12$, one knows 12 $8=4$ ): and creating equivalent but easier or known sums (e.g., adding $6+7$ by creating known equivalent $6+6+1=12+1=$ 13).

Work with addition and subtraction equations.
. Understand the meaning of the equal sign, and determine if equations involving addition
which of the following equations are true and hich are false? $6=6,7=8-1,5+2=2+$ $5,4+1=5+2$.
8. Determine the unknown whole number in an addition or subtraction equation relating three whole numbers. For example, determine the unknown number that makes the equation $-3,6+6=$

## See Glossary, Table 1 . <br> Students need not use formal terms for these

 properties.Extend the counting sequence. 1. Count to 120 , starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.

## Understand place value.

2. Understand that the two digits of a two digit number represent amounts of tens and cases:
a. $\quad 10$ can be thought of as a bundle of ten ones - called a "ten"
. The numbers from 11 to 19 are
composed of a ten and one, two, three, four, five, six, seven, eight, or nine ones.
c. The numbers $10,20,30,40,50,60$, 70, 80, 90 refer to one, two, three, four, five, six, seven, eight, or nine tens (and 0 ones)
3. Compare two two-digit numbers based on anings of the tens and ones digits, mbols the results of comparisons with the

Use place value understanding and properties of operations to add and subtract.
4. Add within 100 , including adding a twodigit number and a one-digit number, and adding a two-digit number and a multiple of 10 , using concrete models or drawings and strategies based on place value, properties of addition and subtraction; relate the strategy a written method and explain the reasoning used. Understand that in adding two-digit numbers, one adds tens and tens, ones and ones; and sometimes it is necessary to compose a ten.
5. Given a two-digit number, mentally find 1 more or 10 less than the number, without having to count; explain the reasoning used. 6. Subtract multiples of 10 in the range $10-9$ from multiples of 10 in the range 10-90 (positive or zero differences), using concret place value, properties of operations, and/or the relationship between addition and subtraction: relate the strategy to a writ method and explain the reasoning used.

Geometry
1.G

Reason with shapes and their attributes 1. Distinguish between defining attributes (e.g., triangles are closed and three-sided) versus non-defining attributes (e.g., color, rientation, overall size) ; build and d shapes to possess defining attributes 2. Compose two-dimensional shape (rectangles, squares, trapezoids, triangles, half-circles, and quarter-circles) or threeprisms, right circular cones, and right circula cylinders) to create a composite shape and compose new shapes from the composite shape. ${ }^{1}$
3. Partition circles and rectangles into two and four equal shares, describe the shares using the words halves, fourths, and quarters, and use the phrases half of, fourth of, and quarter of. Describe the whole as two of, or four of the shares. Understand for these examples that decomposing ito more equal shares create smaller shares

Students do not need to learn formal names such as "right rectangular prism."
